|------------------------|-----------------------|
| Product: | Fuel Filter 40 Micron |
| Currawong part number: | CE1203 Revision B |
| Serial numbers range: | NA |

Introduction

The CE1203 Fuel Filter 40 Micron has been a standard offering with Currawong Engineering engine systems since 2016, and is used in-line with the engine fuelling system to provide protection for the fuel injector. Recent changes to the supplier specification of this filter require a revision to the product designation, and this bulletin advises of this change and the differences in the revised component.

Outcomes

The updated Revision B filter has a different appearance, and is constructed of a more opaque white plastic. The filter element is a lighter yellow colour and appears to have a larger diameter.

Dimensions of the Revision B filter vary as listed:

- Overall length (barb to barb) is the same (nominal 63mm)
- Length of the filter housing is 1mm shorter (nominal 26mm)
- Diameter of the housing body is 0.5mm greater (nominal 19.9mm)
- Diameter of the housing cap is 4mm greater (nominal 26.2mm)

Recommendations

No action required by existing customers. Future supply as of 1st January 2021 will be the Revision B CE1203B component.
